OUR GROUP:

The ***Bukidnon Umayamnon Tribe*** of the Philippines, with Certificate of Ancestral Domain Title (CADT 124).

An **Indigenous Peoples Organization (IPO)** for 29 yrs now, and is purely a Community-based Organization managed by the Council of Elders (COE), called the ***Bukidnon Umayamnon Tribe Kapu-unan To Mga Datu (BUKDA)***.

Our Project area is our Ancestral Domain (AD), about 8,106 hectares.

The Overall Responsibility of the Project rests upon the COE headed by its Chairman.

SMALL GRANTS. BIG IMPACT.

Project Implementation Period:
From April 2022 to September 2023

Adaptation Fund Climate Innovation Accelerator (AFCIA) AF-EU-UNDP Innovation Small Grant Aggregator Platform

Empowered lives.
Resilient nations.

The Primary Objectives of Our Project are to:

- 1) Help in the participatory mitigation of Climate Change Impacts and accelerate Watershed Rehabilitation and Soil Erosion Control along the riparian zone; and
- 2) Generate sustainable income for the Indigenous Peoples (IPs).

Adaptation Fund Climate Innovation Accelerator (AFCIA) AF-EU-UNDP Innovation Small Grant Aggregator Platform

Expected Significant Project Impacts:

- 1) Provides small income through labor on temporary employment of farmer-members (***which includes women***) and helps assure the availability of food and other basic needs for the family.
- 2) Was able to plant **20 hectares** of vegetation as green cover, along the denuded **riparian zone** of the Pulangi River (i.e., **10 hectares of Giant Bamboo** and **10 hectares of Cacao**).

Aside from its high Carbon Sequestration property, the Giant Bamboo (*Denrocalamus asper*) will produce edible bamboo shoots starting the third year and the marketable mature bamboo culms starting the sixth year up to about 30 years (if managed sustainably).

Adaptation Fund Climate Innovation Accelerator (AFCIA) AF-EU-UNDP Innovation Small Grant Aggregator Platform

Expected Significant Impact and Metrics:

- 3) The marketable products from Cacao Plantation will start to come during the middle of the third year from planting.
- 4) During the 18 months Project life, the resulting benefits for the farmer-members will be basically through short-term employment in the Project, and the sustainable income will start to come when the Bamboo Culms and the Cacao products will already be marketable.

On the 3rd Year of Cacao Plantation Projection

Adaptation Fund Climate Innovation Accelerator (AFCIA) AF-EU-UNDP Innovation Small Grant Aggregator Platform

NEXT STEPS TOWARD SCALING-UP

- 1) We have been applying for other grants from potential donors (such as; IKI, UNDP, etc.) and participating in Investors Rountables (AVPN / UNDP).
- 2) We have joined the AVPN's Deal Share Platform (DSP).
- 3) We have been exploring how to set-up a project on the marketing of **Carbon Credits** from the **Cacao** and the **Bamboo** Plantations (with VNV and UNDP's support).

BUT FIRST AND FOREMOST TOWARDS SUSTAINABILITY,

- 4) We have to find funds for the protection and maintenance of the 10-ha **Cacao Plantation** starting the **19th Month** until the **third year** from planting.
- 5) We have to find funds for the protection and maintenance of 10-ha **Bamboo Plantation** starting the **19th Month** until the **sixth year** from planting.
