

# FLOATING GARDEN

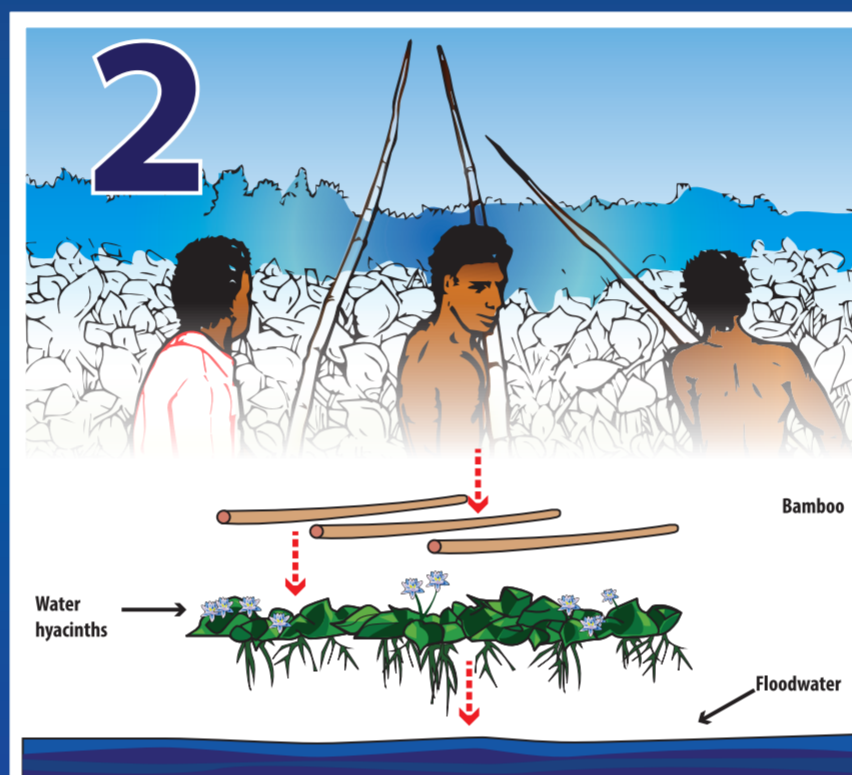

## Usefulness:

- Good for flooded areas
- Good for planting leafy vegetables like spring onions, tomatoes, pumpkin, chinese cabbages.
- Rafts can be moved to shady/cool areas to avoid extreme heat to improve growing conditions.

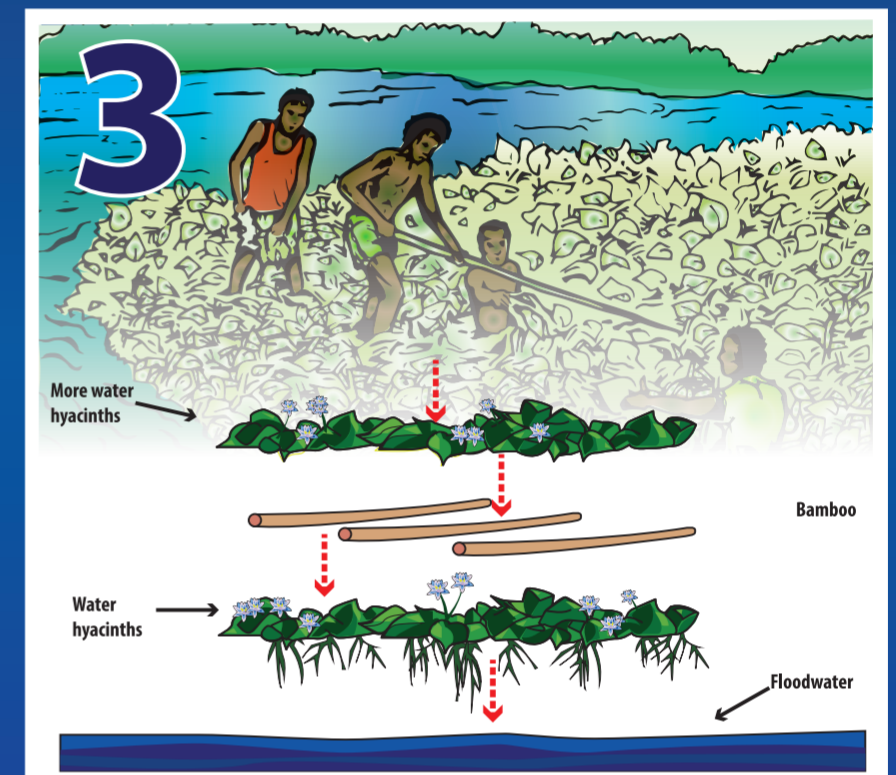

## How to build:

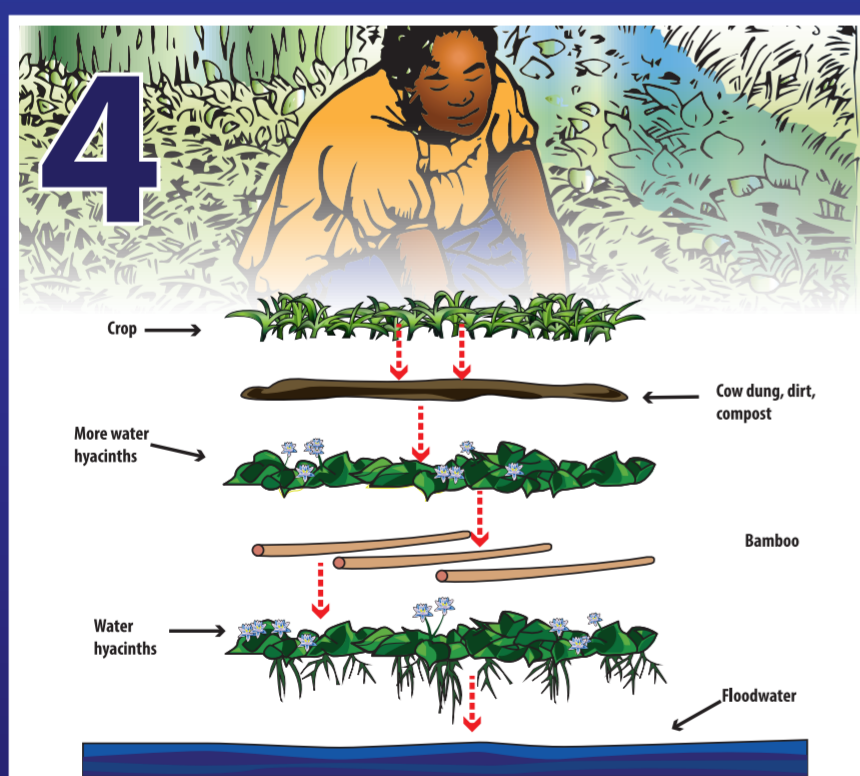

Collect water hyacinth

Place or lay bamboo poles on top/over hyacinth

Place more water hyacinths over the bamboo poles to make a raft structure of around 8x2 metres

Cover raft with soil, compost and chicken manure together with weeds and then plant crops.

Move the rafts to cooler/shady areas for improved growing conditions of the food.
