

Quarterly Reporting Template
Enhancing Food Security in the context of Global Climate Change – LDCF Project

State Reporting Period: 26/10/17 to 07/11/17.

Key Stakeholder: Statistic & Local License Unit – Fisheries Division.

Name of Key Contact: Kokoria Taon Temware (HOU) OR Tooreka Taatoa (HOD).

A. PLANNED ACTIVITIES

- *To implement socio-economic study to inquire the dependency of fish/invertebrates for cash and subsistence living.*
- *To formally liaise with Council for courtesy call and resource planning.*
- *To establish a check-point whereto review and update of data collected and other issues are addressed.*
- *To equally distribute the number of household per team member for ease of workload.*
- *To ensure 70 percent coverage is achieved.*
- *To allocate adequate time for effective implementation of activity during our stay.*

B. ACTIVITY PROGRESS TO DATE

The time-poor activity was executed as planned and data was collected and reviewed at the end of each day. It happened that extra activeness was very indeed required to ensure sufficient accommodation of time for report consolidation and sorting of data properly as the last role prior return to base.

On top of everything, regardless of profuse efforts and time invested, the team had ungrudgingly succeeded and comported with the main visit's goal.

C. RESULTS ACHIEVED

- *Surveyed households and coastal fisheries' interrelationship is indeed common.*
- *Finfish is predominantly harvested compared to invertebrate species and their absolute substitute a.k.a tinned fish. They are commonly consumed on a weekly/monthly basis.*
- *Variations in seafood consumption across the island.*
- *Coastal fisheries' abundance is at the verge of unsustainable whereas their distribution is widely sporadic across the island.*

D. BENEFICIARY

The household's percentage coverage is roughly 70 percent. This indeed accounts to approximately 248 households visited with around 1000 residents. In terms of gender desegregation, interviewees' figure is virtually around 96 percent men and 2 percent women who are heads of each visited household. Government officials stationed on the island who are visited do have a minimal coverage – roughly 2 percent.

E. Extra activities not reflected in the work plan

Nil

F. Challenges/Problems encountered and recommended actions.

The primary challenge is the number of households in Tebangetua is way less than what is specified in our SPC census software programme which would directly intervene with the survey's coverage. Above all, everything is going well as expected during the course of activity implementation on the island.

G. Activities aligned to Strategies of KDP 2016-2019

- *To secure Village/Island seafood within the context of climate change.*
- *Campaigning awareness of unsustainable fishing gears/methods to induce climate change adverse effects.*
- *Strengthening traditional fishing skills & knowledge.*
- *Promoting equality in the exploitation of finfish and invertebrate species.*
- *Etc.*
