

PRESS RELEASE

[Roll out of the Food Security Project Activities on Maiana.](#)

A team from the Ministry of Fisheries and Marine Resource Development from the Fisheries Coastal Division based in Tanaea, visited Maiana from 20 – 29 April, 2018, to roll out activities under the Food Security Project, better known as the LDCF project, managed by MELAD, with fund support from the Global Environment Facility (GEF) and administered by UNDP.

One official from the Fisheries Division conducted a training on Post-Harvest and value addition from Tebikerai to Bubutei. During the training participants were taught on how to preserve fish, other bivalve and clam in the bottle that could last 3 months, they also learned different recipes on how to cook different kind of fish, such as bonefish ball, yellow fin tuna and smoke fish, etc. The main idea for contacting this training is to demonstrate to climate resilient practices to enhance Food Security as climate change worsens and same time could also earn sources of income from their marine resources in selling such value added products beside just cutting coconut copra.

Almost 80 participants were selected as 6 from each wards from Tebikerai to Bubutei during the workshop. The staff from the island council and some interested women had a chance to attend the same training and learned how to do the smoke fish and bonefish ball.
